

## Project 1: Three Insights from dashboards

### Insight 1:

I have an overall look at the deaths of African countries, and I noticed that Mozambique has a slight increasing in the rate deaths in the recent recoded years (2013-2014).

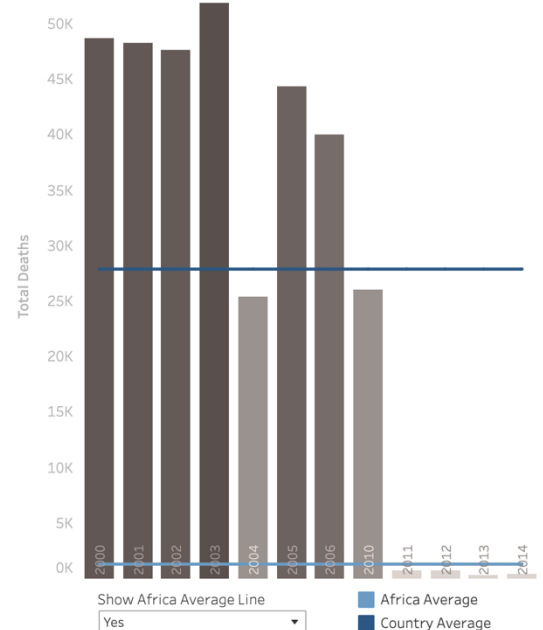

How have the number of malaria deaths changed over time in **Mozambique**?

### Insight 2:

When I clicked on Kenya, I noticed the death rate has hugely decreased since 2011. Before that the average rate was very high. I think we should learn from this country about the precautions that they implemented to control the disease.

How have the number of malaria deaths changed over time in **Kenya**?

Insights 3:

The average deaths in Mauritania are noticeably very low compared to the average of the countries in Africa. With that being said, we should keep in mind that years (2000-2005) are not recorded.
